

Technology designed to help manage the challenges of patient monitoring

Capnostream™ 35 Portable Respiratory Monitor

Continuous, non-invasive, real-time respiratory status monitoring of etCO₂, SpO₂, respiration rate (RR), and pulse rate (PR).

Integrated Pulmonary Index™ (IPI) is engineered to help clinicians easily monitor patient ventilatory and oxygenation status.

The IPI algorithm incorporates four real-time respiratory measurements into a single number that represents an inclusive respiratory profile.

IPI is displayed on a scale from 1 to 10, with 10 indicating a normal respiratory status. To aid in monitoring patients over time, IPI is captured and analyzed to show upward and downward trends.

IPI	Patient Status
10	Normal
8-9	Within normal range
7	Close to normal range; requires attention
5-6	Requires attention and may require intervention
3-4	Requires intervention
1-2	Requires immediate intervention
